

# Recharge & disinfect the air in your home.

Take advantage of an exclusive offer from **AtmosAir** to improve & monitor your indoor air quality at home.

## How healthy is your air?

Airborne molds, bacteria, viruses, allergens, asthmagens and off-gassed volatile organic compounds (VOCs) make for a veritable cocktail of indoor pollutants. Conventional air filtration systems lack the ability to address the problem at the source and often treat only 40% of particulates that exist in the air.

The EPA estimates that nearly **two-thirds** of our toxic chemical exposure comes from our homes.

### BEDROOMS

Bacteria & viruses, pet dander, dust & dust mites

### BATHROOMS

Mold, mildew, bacteria & viruses, household cleaning products

### LIVING AREAS

Tobacco smoke, organic chemicals from carpeting, furniture, glues & varnishes, pet dander & other allergens

## Breathe Better Air

AtmosAir systems improve indoor air at the source.

AtmosAir is the leading manufacturer of air purification systems using bipolar ionization technology. Our unique patented system has been rigorously tested and scientifically proven to be among the most effective solutions for comprehensive indoor air purification. Unlike other systems, AtmosAir doesn't wait for pollutants to find their way into a filter. Instead, energized ions actively seek out and neutralize contaminants at their source throughout your indoor environment, mimicking the way nature cleanses the air outdoors.

► **AtmosAir Systems** are being used in the fitness & wellness rooms at Hilton properties around the world.
